The Race for the Qubit by Arnon Daniel Katz (2025)
Quantum computers have three states, the third being that undetermined state of Quantum Physics where Schrödinger's cat can be said to be both alive and dead.

A tri-state CPU can process hundreds of times faster than conventional CPUs, accomplishing in 20 minutes a task that would take the fastest modern supercomputer 47 years. Qubit computers will revolutionize computing and obsolete everything we currently know in cybersecurity.

Hidden Figures by Margot Lee Shetterly, audio book read by Robin Miles (2016)

True story of the "human calculators" in Nasa's Apollo program. The women, mostly black, did manual calculations for Nasa scientists. There pivotal role was not well known. Many also became Nasa's first computer programmers
