Do Now

Spend a few minutes filling this out in preparation for our classroom discussion.

1. What is an operator?

    a) person who answers the phone
    b) a variable data type
    c) a mathematical symbol used to act on a variable
    d) a type of surgeon

2. What is an if-statement?

    a) a logical statement to control if a section of code will be executed or not
    b) the way to exit a program
    c) the name of a rock band

3. What is the difference between the way we use an equal sign in math class and computer science class?

4. If the variable isColdOutside is true, what does !isColdOutside mean? (when we add an exclamation mark in front of a true/false value)

    a) it still means true,
    b) it means false,
    c) it means unknown,
    d) it means very important,
    e) it doesn't mean anything, it was probably an error.

5. >, <, and == are:

    a) relational operators
    b) logical operators
    c) conditional operators
    d) ternary operators

6. &&, ||, and ! are:

    a) relational operators
    b) logical operators
    c) conditional operators
    d) ternary operators
